

DEPARTMENT OF AMERICAN STUDIES

PRESENTS THE JOEL M. JONES LECTURE

THE YEAR THE STARS FELL: TOWARD A CONTINENTAL HISTORY OF A VERY FEW HOURS

BY **DR. PHIL J. DELORIA**

In the early morning between November 12 and 13, 1833, meteors from the annual Leonid showers fell in such abundance, frequency, and size that people ran from their homes to contemplate the celestial light show. Deloria explores how a diversity of people made sense of the falling stars, of such a powerful celestial sign.

Philip J. Deloria (Standing Rock Sioux) is the Leverett Saltonstall Professor of History and Literature at Harvard University. He is currently the Katrin H. Lamon fellow at the School of Advanced Research, Santa Fe.

**THURSDAY, MAR 21ST, 2024
HODGIN HALL, BOBO ROOM
